Full Stack Developer with 4 years of experience building scalable web applications, from real-time systems (concurrent bidding, video streaming) to e-commerce platforms with high-volume catalogs. Frontend with React, Next.js, and TypeScript, state management with Redux/Zustand/React Query. Backend with Node.js (Express.js, Nest.js) and Java (Spring Boot), with a focus on SQL/NoSQL database design and performance-oriented decoupled architectures.

PROFESSIONAL EXPERIENCE

Grupo Aberasturi - Livestock Auction Platform | Argentina, Remote Freelance

Full Stack Developer

March 2026 – Present

- Implemented an event-driven real-time bidding system, synchronizing auction state —current price, lots, buyer balance.
- Built a standalone video streaming server in Node.js using WebRTC (MediaSoup + Socket.IO), decoupled from the main backend, broadcasting the auctioneer's feed to ~30 connected participants per auction without per-client encoding overhead.
- Managed the complete lifecycle of an auction on a PHP/Laravel platform (pending → active → finished), including live chat between auctioneer and buyers and automated email notifications to the winning bidder.

WigiLabs – Airline Project | Argentina, Remote

Full Stack Developer

May 2025 – Present

- Developed 'Smart Sizing', a feature that suggests the ideal uniform size for airline crew members based on body measurements, using a Python mapping algorithm integrated with Spring Boot/React and MySQL.
- Currently architecting and implementing migration to microservices architecture using AWS Lambda, improving system scalability and maintainability.
- Optimized database queries and implemented caching strategies, improving application performance by 40%.
- Hands-on experience with Claude Code as part of my daily development workflow, including critical review and refinement of AI-generated code before integrating it.
- Provided support and maintenance for the legacy site, including database updates, in parallel with the system's migration to microservices

Ai Monkey - Consultancy | Argentina, Remote

Full Stack Developer

June 2022 – January 2025

- Built a landing page using Next.js with latest React Server Components and streaming SSR patterns.
- Implemented internationalization (i18n) using next-intl supporting English and Spanish with dynamic locale switching.
- Implemented comprehensive backend integrations using Nest.js, creating RESTful APIs to link educational content with mental health sections, exercises, and symptom tracking features.
- Implemented JWT-based authentication with OAuth2 integration (Google, Facebook, Apple) and role-based access control (RBAC).
- Built a collaborative platform for uploading, sharing, and viewing multimedia content across 4 media types (image, video, audio, text) supporting 14+ file formats, using S3 for storage.
- Designed the database schema with Prisma and implemented role-based permissions and actions by user type in the backend.
- Developed a complete e-commerce catalog system managing 240+ products with variants, including shopping cart and payment integrations (Affirm, Authorize.Net)
- Designed UI with React and Next.js, managed global state using Redux and optimized for mobile devices.
- Implemented HubSpot CRM integration, analytics tracking using Google Tag Manager, Hotjar.
- Built responsive product catalog with advanced filtering, search, and sort.
- Support dockerized deployment and CI/CD pipeline work on AWS as part of ongoing platform maintenance.
- Optimized image gallery loading by 30% using Next.js (Image component), converting files to WebP format, and applying quality-limited compression, while storing the optimized assets in S3.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, Python, PHP

Frontend: React, Next.js, Redux, Zustand, React Query.

Backend: Node.js, Express.js, Nest.js, SpringBoot

Databases: MySQL, MongoDB, PostgreSQL

ORM & Database Tools: Prisma

Cloud & DevOps: AWS (Lambda, S3, EC2), Docker, Git (GitHub, GitLab)

Real-time & Streaming: WebRTC, event-driven architecture

LANGUAGES

Spanish: Native

English: B2

EDUCATION

Soy Henry – Bootcamp – Web Develop Full Stack, 2021

UNSAM - Industrial Engineering 2011–2022 (advanced coursework, not completed — 4th year)
